FOR IMMEDIATE RELEASE

Interactive Event Showcases ‘Nuclear Climate Change’ during COP26

[Stirling, Scotland] – During the first week of COP26, the International Forum for Understanding tackles ‘Nuclear Climate Change’ with a multimedia event taking place on November 1st at historic Stirling Castle located roughly 30 minutes from Glasgow.

Open to the public, the event explores the climate-nuclear nexus and related areas of existential threat.

Christine Parthemore, CEO of the Council on Strategic Risks, is slated to discuss the urgency of connecting nuclear war to climate change while a panel of young, global thinkers examines existential threats and interconnected solutions. A unique immersive theatre experience will also debut.

According to Les Simm, Executive Director of the International Forum for Understanding, ‘We aim to encourage discussion on nuclear issues - including weapons and civil uses of nuclear power — within the context of the Sustainable Development Goals. Our intergenerational approach targets disinformation while making the debate more accessible to those without specialist knowledge.’

Accordingly, this week the International Forum launched a corresponding menu of ‘Climate Change in Context’ multimedia interactions. Ranging from digital games for children to virtual-learning modules for decision-makers, this innovative material will develop throughout the COP26 summit, with new activities added each day.

More information about the ‘Nuclear Climate Change’ event and the ‘Climate Change in Context’ multimedia material is available here: <https://ifound.global/forum/>

NOTES FOR EDITORS

Based in Cambridge, the International Forum for Understanding promotes constructive dialogue and impactful solutions for urgent contemporary challenges such as nuclear, biological, chemical, and strategic conventional weapons (NBC and SCW), disarmament, arms control, and non-proliferation. Through facilitating discussion among opinion leaders and an innovative range of actors, the International Forum for Understanding focuses on achieving actionable results informed by diverse, intergenerational perspectives.
